Overview
This program is a pre-vocational electrical program, designed to provide an introduction to the electrical/electronics industries in areas such as air-conditioning, electrical, refrigeration or instrumentation. It enables you to develop broad based competencies in a range of electrotechnology fields such as lighting, general power, fire protection and security, robotics, instrumentation, optical data and voice systems, electrical motors and control systems. It also enables you to make more informed choices in the selection of vocational career paths and gain recognised credentials and credits for further training as an apprentice or trainee in the electrotechnology industry.

During this program, you are required to provide overalls, work boots and clear safety glasses. This program will be delivered in our new facility purposely built for the electrical industry, which opened in early 2015.

Qualification and recognition
This VET program contributes to your VCE or VCAL. For more information on credit arrangements please visit the website or contact your VET in Schools Coordinator.

Pathway and further study opportunities
At the completion of this program, you may wish to continue your studies in the Certificate III in Electrotechnology (Electrician). You may also apply for credit towards this program.
